ASSIGNMENT 9

AIM:-

Company maintain employee information as employee ID ,name,designation and salary. Allow user to add, delete information of employee. Display information of particular employee. If employee doesn't exists an appropriate message is displayed. Use index sequential file to maintain the data.

OBJECTIVE:-

To implement file handling and perform functions like insertion, deletion and display of data using index sequential file.

THEORY:-

Records in indexed sequential files are stored in the order that they are written to the disk. Records may be retrieved in sequential order or in random order using a numeric index to represent the record number in the file. The record size, specified when the file is created, may range from 1 to 8000 bytes. When an Internet Basic program opens an indexed sequential file, the Comet operating system assigns a unique record pointer to the file. Each user opening the file is assigned a unique pointer, allowing multiple users to access data from the same file at the same time. To avoid data integrity problems when more than one user is accessing a file, Comet provides a record locking mechanism. The EXTRACT statement is used to read and lock individual data records. When an indexed sequential file is opened, the record pointer is positioned at the first record. Subsequent I/O operations change the location of the pointer. Note: Some I/O operations do not move the pointer.

EXAMPLE:

For example, to read all the records from an indexed sequential file in order, you would open the file and read the records without specifying an index. This would move through the file in sequential order and end when the last record was read. To read a specific record from an indexed sequential file, you would include the KEY= parameter in the READ (or associated input) statement. The "key" in this case would be a specific record number (e.g., the number 35 would represent the 35th record in

the file). The direct access to a record moves the record pointer, so that subsequent sequential access would take place from the new record pointer location, rather than the beginning of the file.

Application: Indexed sequential files are commonly used for transaction files because they take less disk space than keyed files, and are faster to read from beginning to end than a keyed file.

ALGORITHM:

1.INSERT NODE IN FILE

```
void Create()
 char ch='y';
 ofstream segfile;
 ofstream indexfile;
 int i=0;
 indexfile.open("IND.DAT",ios::out|ios::binary);
 seqfile.open("EMP.DAT",ios::out|ios::binary);
 do
 {
  cout<<"\n Enter Name: ";</pre>
  cin>>Records.name;
  cout<<"\n Enter Emp ID: ";
  cin>>Records.emp id;
  cout<<"\n Designation";
  cin>>Records.des;
  cout<<"\n Enter Salary: ";
  cin>>Records.salary;
  cout<<Records.name<<" "<<Records.emp_id<<"
"<<Records.salary;
  seqfile.write((char*)&Records,sizeof(Records));
  Ind Records.emp id=Records.emp id;
  Ind Records.position=i;
  indexfile.write((char*)&Ind Records,sizeof(Ind Records));
  i++;
  cout<<"\nDo you want to add more records?";
```

```
cin>>ch;
  }while(ch=='y');
  seqfile.close();
  indexfile.close();
}
2.DISPLAY FILE
void Employee::Display()
 ifstream segfile;
 ifstream indexfile;
 seqfile.open("EMP.DAT",ios::in|ios::binary);
 indexfile.open("IND.DAT",ios::in|ios::binary);
 cout<<"\n The Contents of file are ..."<<endl;
 int i=0:
 while(indexfile.read((char
*)&Ind Records, size of (Ind Records)))
 {
   i=Ind Records.position*sizeof(Rec);
   seqfile.seekg(i,ios::beg);
   seqfile.read((char *)&Records,sizeof(Records));
   if(Records.emp id!=-1)
   cout<<"\nName: "<<Records.name<<flush;</pre>
   cout<<"\nEmp ID: "<<Records.emp id;
   cout<<"\nDesignation :"<<Records.des;</pre>
   cout<<"\nSalary: "<<Records.salary;</pre>
   cout<<"\n";
     }
 seqfile.close();
 indexfile.close();
}
```

3.SEARCH A RECORD FROM FILE

```
Void Search()
 fstream segfile;
 fstream indexfile:
 int id,pos,offset;
 cout<<"\n Enter the Emp ID for searching the record ";
 cin>>id:
 indexfile.open("IND.DAT",ios::in|ios::binary);

 while(indexfile.read((char
*)&Ind Records, size of (Ind Records)))
  if(id==Ind Records.emp id)
   pos=Ind Records.position;
   break;
  }
 }
  if(pos==-1)
  cout<<"\n Record is not present in the file";
  return;
  offset=pos*sizeof(Records);
  seqfile.open("EMP.DAT",ios::in|ios::binary);
  seqfile.seekg(offset,ios::beg);
  seqfile.read((char *)&Records,sizeof(Records));
  if(Records.emp id==-1)
  cout<<"\n Record is not present in the file";
  return;
  }
  else
```

```
{
  cout<<"\n The Record is present in the file and it is...";
  cout<<"\n Name: "<<Records.name;</pre>
  cout<<"\n Emp ID: "<<Records.emp id;
  cout<<"\n Designation: "<<Records.des;</pre>
  cout<<"\n Salary: "<<Records.salary;</pre>
  }
  seqfile.close();
  indexfile.close();
4.DELETION OF RECORD
void Employee::deletion()
{
     int id, pos;
     cout<<"For deletion"<<endl;
     cout<<"\n Enter the employee id for searching"<<endl;
     cin>>id;
     fstream segfile;
     fstream indexfile;
  seqfile.open("EMP.DAT",ios::in|ios::binary|ios::out);
 indexfile.open("IND.DAT",ios::in|ios::binary|ios::out);
 seqfile.seekg(0,ios::beg);
 indexfile.seekg(0,ios::beg);
 pos=-1;
 while(indexfile.read((char
*)&Ind Records, size of (Ind Records)))
 {
  if(id==Ind Records.emp id)
  {
   pos=Ind_Records.position;
   Ind_Records.emp_id=-1;
   break;
  }
 }
  if(pos==-1)
SY -C DEPARTMENT OF COMPUTER ENGINEERING, VIIT
```

```
{
  cout<<"\n Record is not present in the file";
  return;
  int offset=pos*sizeof(Rec);
  seqfile.seekp(offset);
  strcpy(Records.name,"");
  Records.emp id=-1;
  Records.salary=-1;
  strcpy(Records.des,"");
  seqfile.write((char *)&Records,sizeof(Records))<<flush;</pre>
  offset=pos*sizeof(Ind Rec);
  indexfile.seekp(offset);
  Ind Records.emp id=-1;
  Ind Records.position=pos;
  indexfile.write((char *)&Ind Records,sizeof(Ind Records));
  seqfile.seekg(0);
  indexfile.close();
  seqfile.close();
}
CODE:-

```

OUTPUT:-

CONCLUSION:-

We have successfully implemented file handling and performed functions like insertion, deletion and display of employee data using index sequential file.
